NEW DELHI: India will get six low frequency Active Towed Array Sonar (ACTAS) systems, that will be fitted on the Kamorta-class corvettes, later this year from Germany. The system, which can detect enemy submarines, will give a fillip to India's anti-submarine warfare capabilities. India had late last year signed a contract for the towed array

The towed array sonar is effective in the detection and tracking of faint sounds such as the low noise-emitting submarine threats or seismic signals. This passive TAS has superior resolution and has a wider range than with the hull-mounted sensor. This covers the baffles which is the blind spot of hull-mounted sonars.

To track enemy submarines, ASW corvettes need to have something known as Active Towed Array Sonar or Actas. This is a system of hydrophones towed behind a vessel on a cable that can be kilometers long. This keeps the array's sensors away from the noise sources of the ship towing it, thereby improving its signal-to-noise ratio.
