Nonlinear Structural Analysis

A nonlinear analysis is an analysis where a nonlinear relation holds between

applied forces and displacements. Nonlinear effects can originate from geometrical nonlinearity's (i.e. large deformations), material nonlinearity's (i.e. elasto-plastic material), and contact.

In short explained: Linear and nonlinear structural analysis

Linear vs. Nonlinear Analysis • Linear

- Structure returns to original form
- No changes in loading direction or magnitude
- Material properties do not change
- Small deformation and strain
- Nonlinear
- Geometry changes resulting in stiffness change
- Material deformation that may not return to original form
